

Standard Color Palettes

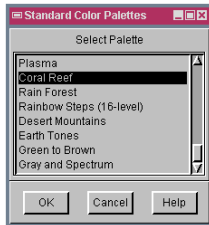

DID YOU KNOW . . . you can use a standard color palette to automatically adjust the color of a raster object?

What Standard Color Palettes Give You

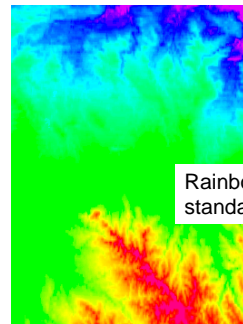

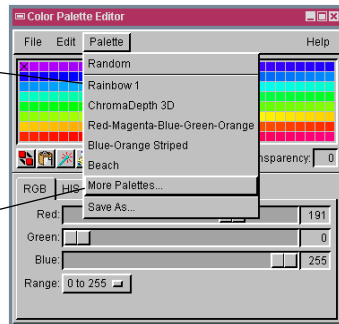

- Easily adjust the color of raster objects
- Select from a number of standard color palettes
- Edit any standard color palette to create a new palette

The last five standard color palettes used are listed here for quick selection.

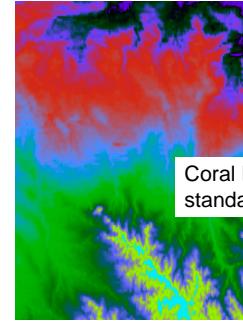

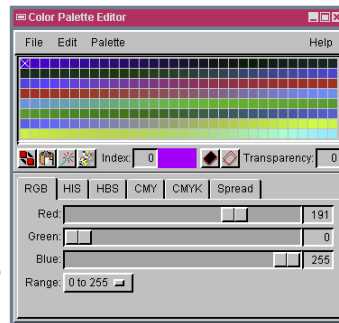

Choose to open Standard Color Palettes window to select from palettes not listed on the Palette menu.

The colors of the selected standard color palette can be edited using the Color Palette Editor tools to create a new palette or assigned directly to the raster object with no change.

Rainbow 1 standard palette

Coral Reef standard palette

How to Use Standard Color Palettes

- In the Display Manager window, select Edit Colors from the raster layer's right mouse button menu or click on the Edit button in Raster Layer Controls window.
- In the Color Palette Editor window, select one of the listed standard palettes or choose More Palettes from the Palette menu.
- If More Palettes selected, scroll up/down in the list in the Standard Color Palettes window, select a standard color palette and click on OK.
- Click on the Redraw icon in the View window to apply the selected color palette.
