

Zoom to Location

DID YOU KNOW . . . you can zoom to a specified location by entering its geographic coordinates?

What Zooming to Location Gives You

- Zoom by scale, width, or height to a specific location
- Enter geographic coordinates manually
- Choose Coordinate Reference System to enter coordinates

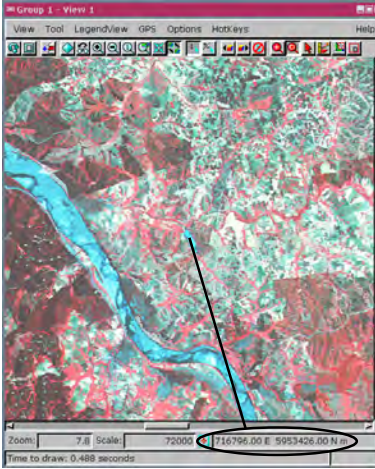

Zoom to Location option

Zoom to Location icon

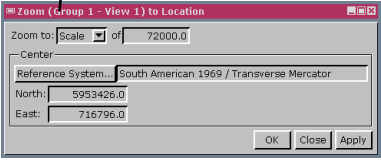

Zoomed in according to coordinates

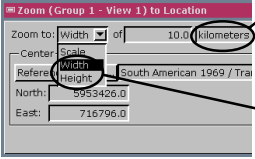

Specified coordinates are positioned at the center of the View window.

Zoom (Group 1 - View 1) to Location

Enter coordinates using any of the Coordinate Reference Systems supported by TNTmips.

Zoom (Group 1 - View 1) to Location

Choose among more than 50 unit options.

Set scale indirectly by selecting height or width options.

How to Zoom to Location

- Select *Zoom to Location* icon in the View window, or
- Click on the View menu in the View window and select *Zoom to Location* option.
- Enter desired North and East coordinates for the center of your View.
- Select *Zoom to scale, height, or width*.
- Enter appropriate values for scale, height, or width.
- Click on *Apply* button, or
- Click on *OK* button to close the *Zoom to Location* window and zoom.
