

A True story:

A large mining company had a consulting firm evaluate their spatial database / GIS / CAD system and advise them on how to streamline their data capture and analysis operations. The consultant produced a 17-page recommendation that the company use an amalgam of AutoCAD, ERmapper, ArcInfo, Cadmine, Surpack, Pegmaker (a survey package), plus three new custom products for kriging, survey plotting, and GIS analysis.

What A Joke.

Uh, gee, is that all?

Fortunately, a **TNTmips** dealer was able to show the company an alternative: all their GIS, image processing, mapping, and spatial analysis work could be accomplished with a single copy of **TNTmips**.

When your production work is no laughing matter, you are ready for the most complete professional product in the world.

TNTmips
No Joke.
