

Translated Getting Started Tutorials

A number of translators have been busy making the Getting Started tutorial booklets available in a growing list of international languages. The list of booklets on the MicroImages web page (www.microimages.com/getstart/) has been redesigned to let you select each booklet by language. Selections include

- | | | |
|----------|---------|---------|
| Chinese | Dutch | English |
| Finnish | French | German |
| Japanese | Italian | Korean |
| Spanish | Turkish | Thai |

Newly translated booklets are frequently added to the list, so if a language or booklet of particular interest is not shown, check the list again on your next visit.

Direct PDF Display in Acrobat Reader

The booklet listings on the web page are linked directly to PDF files. Many browsers can open a PDF file and display it directly in the browser window. You can also use your browser's features to open the booklet in a separate browser window, open it in a new Acrobat Reader window, or save it to your hard disk.

Special Fonts

Of course, to view Japanese, Chinese and Korean booklets in PDF, you will need Adobe's Asian font packs (download them from <http://www.adobe.com/products/acrobat/acrrasianfontpack.html>). As booklets are translated into other languages that also require special characters, you may need other additional special font support.

If you are interested a particular booklet that has not yet been posted, contact MicroImages to find out about its status. You may be put in touch with the translator directly.

If you are interested in the opportunities presented by becoming an Official Translator for booklets not yet available in your language, contact MicroImages.
