

Save/Open Multiple Views

DID YOU KNOW . . . that all windows you have open are saved with the group or layout and will reopen just as when saved?

What Save/Open Multiple Views Gives You

- 2D and 3D views of the same layers open for use just as saved.
- Can provide visualization of different areas of a group at different scales.
- Show/Hide settings for layers in different windows retained when reopened.
- Contents of all windows retain position, scale, and viewpoint.

How Multiple Views and Save/Open Work

- Add any number of layers to the current display window.
- Choose Open 2D View or Open 3D View from the Group menu in the Group Controls window.
- Adjust position and scale using standard (2D) or Viewpoint Controls (3D).
- Hide layers in individual views if desired.
- Save the group (or layout) and open it again (choose Open Group or Open Layout from the toolbar) with all layers and views showing as when saved.
