

Automatic Label Leader Lines

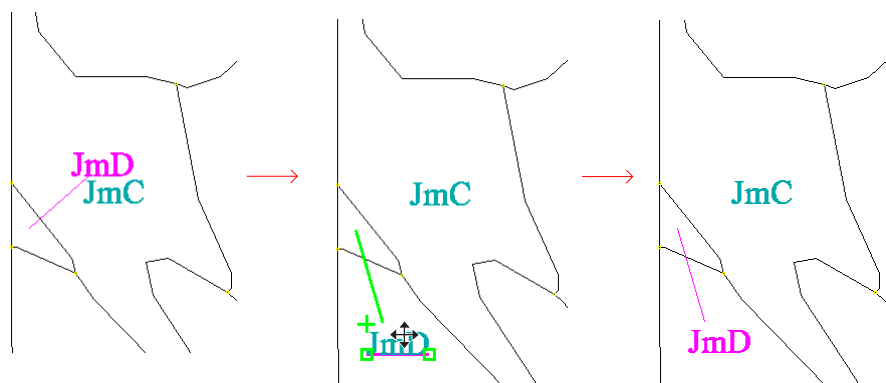

DID YOU KNOW ... leader lines appear or follow labels when label position is edited?

What Automatic Label Leader Lines Give You

- Leader lines inserted when auto-generated label is outside polygon
- Lines elastically follow labels when repositioned
- New leader line inserted when label moved from inside to outside polygon

Leader lines automatically appear when a label is moved outside its polygon.

Leader lines move with labels when they are repositioned.

How Automatic Leader Lines Work

- Use the Auto Generate Label editing operation to create labels for selected polygons.
- Move a label out of a small or crowded polygon and a leader line automatically appears.
- Move any label with a leader line to a new position and the line will follow.
