

Geospatial Catalog Manager

DID YOU KNOW . . . you can use the GeoCatalog Manager to create/edit geocatalogs with the extents and other information about your geodata objects and files?

What the Geospatial Catalog Manager Gives You

- Edit or update an existing catalog or create a new one
- Select folder(s) from local or network locations to scan for the geocatalog
- Exclude specific subfolders from the selected geocatalog or all geocatalogs

Click to select an existing catalog to edit or update, or create a new one.

Selecting Geospatial Catalog Manager from the Tools menu opens the window below.

The files in the folder(s) listed here are scanned for inclusion in the catalog.

The files in the folder(s) selected here are excluded from the current catalog.

The files in the folder(s) listed here are excluded from all catalogs.

Enter a new file name to create a new geospatial catalog.

How to Use the Geospatial Catalog Manager

- Choose *Tools / Geospatial Catalog Manager* from the TNTmips menubar.
- Click on the *Select geospatial catalog* button.
- Select an existing geocatalog to edit or update; or enter a name in the *New File Name* field in the *Select Geospatial Catalog file* window to create a new geocatalog.
- Click on the *Select* button below the *Folders to scan* list to select folders to scan for the geocatalog.
- Click on the *Select* button below the *Folders to exclude from this catalog/all catalogs* lists to select folders to exclude from the current or all catalogs.
- Click on the *Run* button.
