

Topographic Maps of Myanmar

Another Large Project Completed Using TNTmips

1:50,000 series

National mapping agency used TNTmips to revise and publish their 1700 1:50,000 topographic maps.

- Paper maps including contours were converted to digital line work.
- Line work was overlaid, corrected, and updated using ortho-satellite images and DEMs.

- New maps were prepared with required styles, legends, marginalia, and Burmese text and legends using the map layout process.
- File formats and separates were generated for large print presses.
- Also being used in digital form over secure networks.

The new maps prepared under this program are restricted in use and can not be illustrated here.
